# ENERGITE® III

The ENERGITE® III sand barrel array is a gating, non-redirective crash cushion, consisting of a number of sand-filled modules. Each module in the array consists of a one-piece barrel, a lid, and, in some cases, a cone insert. Installed options can meet NCHRP Report 350 Test Level 1, Test Level 2, or Test Level 3, depending on the number of modules. The Energite III can be installed in both permanent and work zone applications and is ideal for wide fixed objects in low frequency impact areas.

# EASY TO USE

## Features

- Cone insert adjusts sand capacity and height.
- Stackable barrel design for easy transport and storage.
- Solid barrel bottom allows for lifting and transporting barrels when assembled and filled.

## Assembly and Maintenance

- Two or three parts per module reducing inventory costs.
- One-piece barrel simplifies and speeds up installation time.
- Stackable barrel configuration provides easy transport and storage.

Nominal Mass		Outer Container Model	Cone Model	Lid
kg	lb			
90	200	640	90/180	x
180	400	640	90/180	x
320	700	640	320	x
640	1400	640	-	x
960	2100	960	-	x
